EDUCATION

Michigan State University Honors College – GPA: 3.9

Aug. 2024 – Dec. 2027

Bachelor of Science in Computer Science, Minors in Data Science and Computational Math

East Lansing, MI

Coursework: Data Structures & Algorithms, Object Oriented Programming, Computer Architecture, Computer Systems

EXPERIENCE

Data Science Platform Engineering Intern

May 2026 – Aug. 2026

Auto-Owners Insurance

Lansing, MI

- Prototyped a Terraform IaC stack for ML batch inference, provisioning **7** AWS resources (SageMaker, ECR, S3, IAM) alongside OpenShift via the Kubernetes provider to enable portability between platforms
- Evaluated Terraform against the team's existing AWS CDK setup and delivered a migration recommendation which helped the team adopt Terraform for future ML batch inference deployments

Software Development Intern

Dec. 2025 – May 2026

APS Data Technologies

- Built an admin document dashboard in Next.js and Django with filtering, email-based invitations, and secure downloads for platform administrators
- Implemented Google and Microsoft Entra OAuth authentication flows in Django from scratch without third-party libraries, handling token verification and role-based registration to enable secure login across multiple user roles in production

Software Engineering Intern

May 2025 – Dec. 2025

Alchemy Software LLC

- Wrote over **20** test cases and created a testing library to reduce the effort of new test cases by **90%**, establishing a reusable validation framework for ongoing feature development
- Debugged and resolved critical issues within new features, ensuring stability for monthly version launches
- Actively managed code conflicts and design integration within a **6+** member team, collaborating in weekly meetings to combine new features and streamline development workflows

PROJECTS

Easy Text Transfer | *Electron, TypeScript, JavaScript, React Native, Expo, Firebase*

Oct. 2025 – Dec. 2025

- Built a cross-platform text and note sync application across desktop and mobile clients using a polling-based architecture with last-write-wins conflict resolution to handle concurrent edits
- Implemented a shared state sync model where the most recently timestamped write takes precedence, eliminating conflict ambiguity without requiring a distributed consensus protocol

GapWrap | *React, Vite, TypeScript, Python, Flask*

Jan. 2026 – Feb. 2026

- Built a crypto sandwich attack detector at SpartaHack 11 with a Python listener and slippage engine backend that flags bot-driven price manipulation on incoming transactions using a React + Vite + TypeScript frontend that visualizes transaction risk in real time.

ORGANIZATIONS

Imagine Software Consultancy | *Project Director*

Aug. 2024 – Present

- Built several applications, including a React frontend for Ollama LLM interaction and a Chrome extension for RESTful API communication with Gemini, cultivating skills in modern web development and AI integration
- Developed and delivered educational workshops on developer tools and Git for **10+** members, including slides, reference documents, and live demos

FRC Team 3604 Goon Squad | *Mechanical Lead*

Sep. 2021 – May 2024

- Designed and manufactured a game piece launch system with best engineering practices, iterating on the subsystem to increase scoring accuracy by **20%** due to increased control over the piece

TECHNICAL SKILLS

Languages & Tools: Python, Java, JavaScript, TypeScript, C++, React, React Native, Next.js, MongoDB, Firebase

Developer Tools: Git, GitHub, Docker, Kubernetes, AWS Console, Atlassian Suite, Claude Code, Linux/Ubuntu

Soft Skills: Communication, analytical thinking, problem solving, troubleshooting, time management, proactive learning
